SUMMARY

Engineering student specializing in AI/ML and Data Science, developing scalable machine learning models, data-driven applications, and production-ready intelligent systems for real-world problem solving.

EDUCATION

CMR University

Expected 2027

Bachelor of Technology in Computer Science and Engineering (Artificial Intelligence and machine learning)

CGPA: 8.80 (till 6th Sem)

SKILLS

Programming: Python C, C++, Java, JavaScript

AI/ML: scikit-learn, TensorFlow, Pandas, NumPy, CNNs, NLP, Deep Learning, Data Preprocessing

Development & Deployment: Flask, Streamlit, HTML, CSS, JavaScript, Docker, Git

Databases: MySQL, MongoDB

Core Concepts: Data Structures and Algorithms, OOPs, DBMS, Operating Systems, Computer Networks

EXPERIENCE

Python Developer Intern

Aug 2025 – Sep 2025

CodSoft — Virtual Internship

- Worked on Python development tasks involving application development, automation, debugging, and software optimization.
- Developed Python-based mini projects using core Python libraries and frameworks to strengthen practical understanding of software development workflows.
- Gained hands-on experience in problem-solving, code testing, application deployment, and real-world software development.

Software Development Trainee

Jan 2026 – May 2026

Technical Training Program

- Developed responsive web applications using HTML, CSS, JavaScript, and React.js for real-world project implementations.
- Worked on backend integration, REST APIs, and database connectivity using Node.js and MongoDB.
- Strengthened problem-solving and software engineering skills through hands-on development and debugging practices.

PROJECTS

AI Interview Simulator

- Developed an AI-powered interview simulation platform that conducts mock interviews and provides real-time feedback to improve candidate performance.
- Integrated emotion recognition and skill analysis techniques to evaluate confidence, communication skills, and technical proficiency during interviews.
- Built an interactive web application using AI/ML models and a user-friendly dashboard to generate performance scores, personalized insights, and improvement recommendations.

GitHub Link

Student Performance Prediction System

- Developed a Student Performance Prediction System using Machine Learning to forecast students' academic performance.
- Applied data preprocessing and feature engineering techniques to improve model accuracy and reliability.
- Built an interactive web interface for visualizing predictions and analyzing student performance trends.

GitHub Link

ACHIEVEMENTS

- Consistently maintained strong academic performance while actively participating in technical events, and coding practice platforms.
- Solved 300+ Data Structures and Algorithms problems across LeetCode, Geekforgeeks, Neetcode, and HackerRank platforms.
